THE
SPECIALIST
FOR CORNERS AND EDGES

→ RECTANGULAR

Thanks to its rectangular exchange-able inserts, SECURAL is the specialist mallet with benefits when working with corners and edges.

→ MAXIMUM REBOUND DAMPING

The mass ratio of mallet head to shot is optimally tuned to the spring properties of the striking faces. This together with the low overall weight of the mallet ensures that work is particularly easy on the joints while a very high power of impact is achieved at the same time.

→ RESILIENT

The longitudinally welded housing ensures an absolutely unbreakable connection between mallet and handle.
